

USAID Environmental Assessment under Regulation 216

GEMS Environmental Compliance-ESDM Training Series

Ghana • January, 2017

2/20/2017

SESSION OBJECTIVES

- I. Identify when a full Environmental Assessment (EA) is required
- II. Define the different kinds of EAs under USAID Reg. 216
- III. Review the steps for preparing an EA

FROM YESTERDAY:

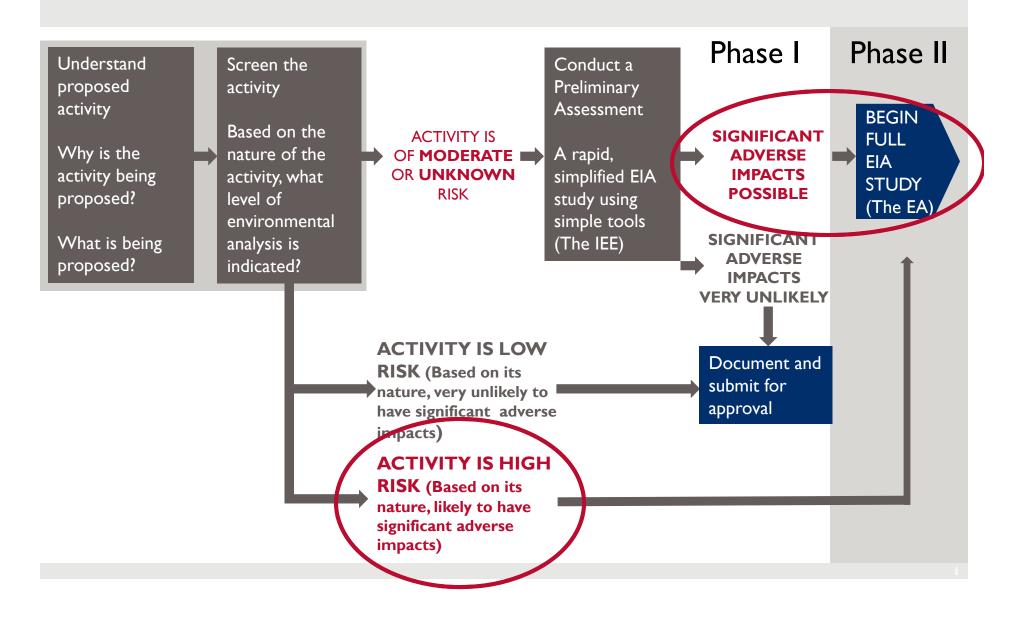

THRESHOLD DETERMINATIONS THAT RESULT FROM AN IEE

FOR **EACH** ACTIVITY ADDRESSED, THE IEE MAKES ONE OF 4 RECOMMENDATIONS REGARDING ITS POSSIBLE IMPACTS:

If the IEE analysis finds	The IEE recommends a	Implications (if IEE is approved)
No significant adverse environmental impacts	NEGATIVE DETERMINATION	No conditions. Go ahead.
With specified mitigation and monitoring, no significant environmental impacts	NEGATIVE DETERMINATION WITH CONDITIONS	Specified mitigation and monitoring must be implemented
Significant adverse environmental impacts are possible	POSITIVE DETERMINATION	Do full EA or redesign activity. Conditions imposed by the EA must be implemented.
Not enough information to evaluate impacts	DEFERRAL	You cannot implement the activity until the IEE is amended

PLUS, the IEE will address any CATEGORICAL EXCLUSIONS carried over from the screening process.

REMEMBER THIS SLIDE? USAID'S IMPLEMENTATION OF GENERAL EIA PROCESS

DEFINITIONS

Environmental Assessment (EA):

A detailed study of the reasonably foreseeable significant effects, both positive and adverse, of a proposed action on the environment of a foreign country or countries.

Environmental Impact Statements (EIS): EIS is similar to EA, but with potential impacts on the US or global environment. Typically not done at USAID.

WHEN IS A FULL EA NEEDED?

 During PAD development, if/when the team proposes activities which fall into the high risk category

 When an IEE indicates that significant adverse impacts are possible (a positive determination)

• When a sub-project review form (e.g., ERF/R) indicates an activity is high risk

TYPICAL "POSITIVE DETERMINATION" ACTIVITIES

216.2 (d) Classes of Actions Normally Having a significant Effect on the Environment – EA automatic

- River basin development
- Large (>100 ha) irrigation or water management projects (including dams)
- Agriculture land leveling
- Drainage projects
- Large scale agricultural mechanization
- New land development
- Resettlement projects
- Construction of new roads
- Power plants, industrial plants
- Sewage and potable water projects
- Forest harvesting

TYPES OF USAID EAS

The Environmental Assessment (EA)

Used to assess the environmental effects of a specific project or action, e.g.

- An EA to assess a single dam or irrigation project
- An EA to assess impacts of a gas or oil pipeline

Programmatic Environmental Assessment (PEA)

Used to assess the environmental effects of a class of similar actions, e.g.,

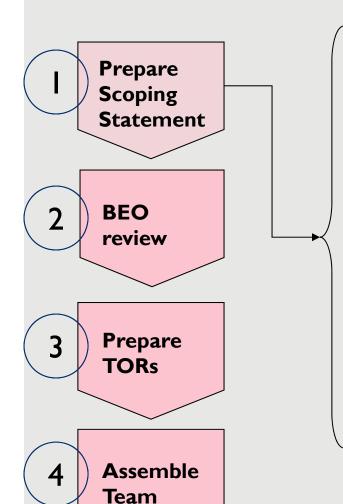

- Dams, irrigation projects and related water resource development,
- Sustainable forest management plans

Rapid Environmental Assessment (REA)

Used to assess, define and prioritize potential environmental impacts in humanitarian assistance situations,

- e.g.,
 - Earthquake
 - Flood
 - Tsunami
 - Landslide

FIRST STEP IN PREPARING AN EA: SCOPING PROCESS

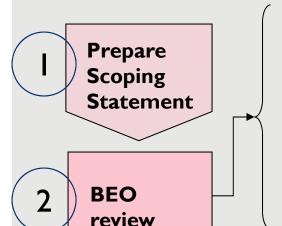

Scoping: determine significant issues the EA will address. (22 CFR 216.3(a)(4))

Scoping statement:

- Scope and significance of issues to be analyzed
- Issues that do not need to be addressed
- Schedule and format of EA, expertise needed
- Proposed methodology
- Public involvement plan
- Informs the SOW for the Environmental Assessment itself.

Good environmental analysis requires public consultation during scoping.

FIRST STEP IN PREPARING AN EA: SCOPING PROCESS

The scoping statement must be submitted to and approved by the Bureau Environmental Officer (BEO)

STRONGLY RECOMMENDED:

Consult with the REA and BEO <u>before the start of</u> <u>the Scoping process.</u>

3 Prepare TORs

Terms of Reference for the EA team are based on the types of issues and analysis required by the scoping statement (no BEO approval required for TOR)

4 Assemble Team

Assemble a team based on the TORs.

Frequently requires contracting with one or more experts, or an EA consulting firm.

SCOPING STATEMENT VS EA CONTENT

SCOPING

- ID impacts requiring further investigation
- Possible alternative actions
- Preliminary baseline information
- Preliminary methodology for the EA
- Consultations
- Timeline, expertise, and approach for the EA

- Scope of the assessment
- Stakeholder engagement process
- Describes & evaluates the baseline situation
- Purpose & Need for the proposed actions
- Describe existing conditions
- Identify & analyze alternatives
- Identify & characterize potential impacts of the proposed activity
- Develop a mitigation and monitoring plan
- Communicate and document the evaluation process

DEFINING ISSUES VIA SCOPING

- An issue is derived from specific activities described under the Proposed Action.
- The <u>issue should be phrased as a cause-effect</u> <u>statement</u> relating to actions under consideration
- An issue statement should describe a specific action (cause) and the potential environmental impact(s) arising from that action (effect)
- Any <u>issues eliminated from further analysis</u> should be documented in the Scoping Statement as "issues considered, but dismissed, and why."

STAKEHOLDER ENGAGEMENT

- Goal: to communicate and inform in an <u>inclusive</u> manner and gather information from stakeholders
- Important for engaging the individuals, groups, and communities that may be affected by the proposed action
- Should be commensurate with the scale of the project
- Utilize a variety of communication tools, including radio, newspaper, meetings, open forums, websites, letters, phone calls...

THE EA OUTLINE

Reg. 216 specifies that an EA will contain the following elements:

- 1. Summary
- 2. Purpose & Need
- 3. Affected Environment, Existing Conditions
- 4. Comparison of Alternatives*
- 5. Environmental Consequences
- 6. Mitigation & Monitoring Plan
- 7. List of Preparers
- 8. Annexes

*Reg. 216 uses the term:

"Alternatives Including the Proposed Action"

I. Summary

Major conclusions

Areas of controversy

Issues still to be resolved.

2. Purpose & Need

Describes the **development need** or **objective** that the proposed action is intended to address

3. Affected Environment

4. Comparison of alternatives

"Succinctly" describe the environment of the area(s) to be affected. Include only a description of the environmental characteristics that may influence or be influenced by the alternatives.

Present the alternatives considered

- Includes the no action alternative
- Explain why certain alternatives were not considered
- Each alternative, including the proposed activity, must be considered <u>equally</u>

Compare the environmental impacts of these alternatives

- Comparative summary of the analysis presented in "Environmental Consequences" (Section 5)
- Include mitigation actions not included in proposed action or alternatives
- Identify the preferred alternative

5. Environmental consequences

Includes the proposed action and the no action alternative

Impacts of alternatives are not compared in this section.

Should include (See 216.6.(c)(5) for full list)

- Any adverse effects and their significance (including those that cannot be avoided)
- Relationship between short-term uses of the environment and maintenance/ enhancement of long-term productivity
- Conflicts with other policies, plans or controls for the areas under consideration
- Recommended mitigation measures

IMPORTANT NOTE

WHEN ASSESSING IMPACTS, TOO MUCH INFORMATION IS AS BAD AS NOT ENOUGH

Provide the most detailed analysis for the more significant impacts.

Summarize or reference for lesser impacts

*See 216.6.(c)(4)

6. List of Preparers

7. Annexes

Names and qualifications of the EA Team

Annexes can be useful in organizing the EA so that only the most critical information for decision-making is in the body of the EA

COORDINATION WITH HOST COUNTRY EA PROCEDURES

Most host countries have EA policies and procedures, USAID must also comply with these requirements

- Most projects that require an EA under Reg. 216 will also require a full EA under host country procedures
- During screening, also screen against host-country categories or criteria.
- If a host-country preliminary assessment or full EIA is required, the objective is to create one document that satisfies both systems.

Collaboration with local Governments can facilitate the environmental analysis process for the Implementing Partners and USAID staff.

SOME GAPS IN THE REG. 216 EA REQUIREMENTS

- Reg. 216 <u>does not</u> have language requiring a <u>detailed</u> mitigation and monitoring plan (EMMP)
- However, Mitigation and Monitoring Plans are essential to making EAs effective, and are in effect required by USAID.

Remember!

Mitigation and Monitoring plans assign responsibilities and establish schedules/time lines and reporting requirements.
